

## T-Systems – Deutsche Telekom's business customer unit

T-Systems is a one-stop information and communications technology (ICT) service provider. As a leading European and global player, T-Systems delivers ICT solutions that enhance companies' flexibility and competitiveness. T-Systems has been Deutsche Telekom's business-customer brand since January 1, 2005. The company posted revenues of nearly €12.9 billion in 2005.

T-Systems' integrated offering is unique, and unrivalled in the ICT world. Within the scope of close partnerships, T-Systems acts as a single point of contact, providing effective, comprehensive answers to all information and communications technology needs.

The portfolio includes the operation of ICT infrastructures, hosting process-related applications, and management of entire business processes, such as billing and payroll accounting. The company has a wide-ranging customer base, comprising leading names in global finance, services, telecommunications, manufacturing, media and utilities, as well as the public sector. Comprehensive industry-specific expertise enables T-Systems to create a powerful mix of standardized and tailored solutions that deliver greater flexibility and productivity, while lowering costs.

Depending on their size, business customers define IT and TC problems and requirements differently. Accordingly, T-Systems consists of two units. T-Systems Enterprise Services is responsible for around 60 multinational corporations and major public-sector organizations. T-Systems Business Services manages the ICT needs of 160,000 mid-size and large companies.

Multinational players and large public-sector organizations already cooperate closely with T-Systems in the IT space. Now, demand is also increasing for telecommunications services. Mid-market and large corporations, by contrast, have long called upon T-Systems for telecommunications, and are now extending these relationships to include cutting-edge IT services. In both cases, T-Systems can provide end-to-end services, including applications via the Internet.

T-Systems also has access to the (Deutsche) Telekom Global Net, which links all the world's key business centers in Europe, North America, and Asia. This unique network infrastructure allows T-Systems to provide international organizations with high-quality ICT services wherever they are based. T-Systems has 32 data centers worldwide. Equipped with fully integrated state-of-the-art technology, they help ensure smooth, reliable operation of business-critical processes – saving customers considerable capital expenditure for physical infrastructure, hardware and software.

The Systems Integration unit helps major international players to gain access to seamlessly linked, standardized processes, methodologies and tools across geographical boundaries. Reusable modular solutions and flexible international account management, and concentrated software production delivers competitive edge and considerable cost savings.
